

**GEOGRAPHY OF  
MESOPOTAMIA  
REFLECTION  
BY: SUMMER NEE**

In Mesopotamia, There  
are VERY hot summers!

A photograph of a river flowing through a dense forest. The river is the central focus, with white water rapids and reflections on its surface. The surrounding forest is lush with green foliage and tall trees, creating a shaded and serene environment. The text is overlaid in the center of the image.

Mesopotamia is located in between  
two rivers - Tigris River and the Euphrates River-  
Causing them to have rich soil to plant crops and  
water to fish in.

The rich soil caused Mesopotamian's to successfully plant plants such as date palm trees. This provided them with dates.

Mesopotamians had two different kinds of lands, one of them was the plains. The plains were located near the rivers so they would create irrigation systems here and also city states.

Their other land was a plateau, a big  
are of high flat land, that they used  
to create  
city states on.

Mesopotamia got very little rain causing them to have hot dry lands.

Mesopotamia had a lot of mud, this mud was used to make mud bricks. The mud bricks were used to make almost every building. So, the mud has a big impact on the Mesopotamians.

The Nile river is west to Mesopotamia.  
The Nile river runs through Egypt and  
Mesopotamia has a relationship with Egypt.
